## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Duffield et al. (US Patent No. 5,398,074) in view of Park et al. (US Patent No. 6,590,618 B1).

In considering claim 1, Duffield et al discloses all the claimed subject matter, note 1) the claimed a display control for displaying television signals from first and second tuners on respective first and second window is met by the channel selection 82 (Fig. 8, col. 6, lines 40-58), and 2) the claimed a processor for receiving control signals and for instructing the tuners to change channels on the respective windows, wherein upon receiving a first control signal, if the first window is not displayed, the processor displays the first window, and if the first window is displayed when the first control signal is received, the processor selects a window not currently selected for channel changing, wherein a channel displayed in the selected window is changed according to a channel changing control signal received by the television apparatus is met by the remote controller 92 and the channel selection 82 (Fig. 8, col. 4, line 18 to col. 7, line 35).

However, Duffield et al explicitly do not disclose the claimed selects the first window for channel changing.

Application/Control Number:

10/587,288 Art Unit: 2622

Park et al teach that the remote controller which changing the channel and/or the volume level of the sub-picture and the main picture in a television having a multiple screen mode functions (col. 3, line 10 to col. 4, line 58).

Therefore, it would have been obvious to one ordinary skill in the art at the time of the invention to incorporate the changing channel as taught by Part et al into Duffield et al's system in order to provide a method and an apparatus for changing the channel or varying the volume of a television receiver.

In considering claim 2, the claimed wherein the processor instructs the display control to highlight the selected window is met by the selected channel 25 which visibly distinguished from the channels by an extra border line 62 in the small image (col. 5, line 43 to col. 6, line 39 of Duffield et al).

In considering claim 3, the claimed wherein the first window is a picture-in-picture window is met by the PIP (Figs. 1 and 2, col. 3, lines 38-58 of Duffield et al).

Claims 4-7 are directed to generate the channel changing control signal by activating picture-in-picture key, channel-up key, number key and go-back key on the remote control is met by the remote controller 92 (whole document of Duffield et al) or the remote controller 20 (Fig. 3B of Park et al).

In considering claim 8, the claimed wherein the processor selects a window other than the selected window upon receiving a second occurrence of the first control signal is met by the channel selection 82 (Fig. 8, col. 6, lines 40-58 of Duffield et al).

In considering claim 9, the claimed wherein further comprising a display for displaying the windows is met by the PIP (Figs. 1 and 2, col. 3, lines 38-58 of Duffield et

al).

In considering claim 10, the claimed wherein the windows are picture-and-picture window is met by the PIP (Figs. 1 and 2, col. 3, lines 38-58 of Duffield et al).

In considering claim 11, the claimed wherein one of the windows is a picture-outside-picture window is met by the POP (Figs. 1 and 2, col. 3, lines 38-58 of Duffield et al).

Claims 12-15 are rejected for the same reason as discussed in claims 1-4, respectively.

Claim 16 is rejected for the same reason as discussed in claim 8.

Claims 17-19 are rejected for the same reason as discussed in claims 5-7, respectively.

## Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Takagi et al. (US Patent No. 7,281,259 B2) disclose channel selection device for use in a digital/analog broadcasting receiver for reception of main and sub channels.

Cohen-Solal (US Patent No. 7,206,029 B2) discloses picture-in-picture repositioning and/or resizing based on video content analysis.

Shibamiya (US Patent No. 6,795,130 B2) discloses signal receiving apparatus, remote controller, signal receiving system, and apparatus to be controlled.
